AIMIFY

Feature Checklist

Every item in the Full Proposed Feature Set (August 2026), ticked against what is built. Status as of 21 October 2026, checked against the aimify-web and aimify_desktop repositories.

> **Where things stand.** 34 of 78 proposed items are done and 17 are partly done. For the MVP, 31 of 57 items are done and 16 partly done. The account, subscription, payments, admin, inventory, customer, supplier and credit foundations are in place. The main MVP gap is **sales**, which doesn't exist yet. Sales also holds up the sales-based dashboard cards and the sales and financial reports. Purchases and expenses work in the desktop app but are saved only on that computer. Offline sync and two-factor sign-in were delivered ahead of plan.

✓ **Done** built and tested ◐ **Partial** incomplete, or saved on one computer only ✗ **Not started** nothing built yet

Summary by phase

Phase	Done	Partial	Not started	Total	Progress
MVP	31	16	10	57	
Phase 2	2	1	7	10	
Phase 3	0	0	4	4	
Differentiators	1	0	6	7	
All items	34	17	27	78	

Progress by module

Module	Phase	Done	Partial	Not started	Progress
Authentication & Account Management	MVP	4	0	1	
Organization Management	MVP	4	0	0	
User & Permission System (RBAC)	MVP	3	0	0	
Product Management	MVP	2	1	0	
Inventory Management	MVP	4	1	0	
Warehouse Management	MVP	3	0	1	
Stock Transfer	PHASE 2	0	0	2	
Purchase Management	MVP	0	1	2	
Sales Management	MVP	0	0	2	
Customer Management	MVP	0	2	0	
Credit Sales & Debt Management	MVP	1	2	0	
Supplier Management	MVP	0	2	0	

Module	Phase	Done	Partial	Not started	Progress
Expense Management	MVP	0	2	0	
Returns Management	PHASE 2	0	0	3	
Dashboard & Analytics	MVP	0	2	0	
Reports	MVP	0	1	4	
Notifications	PHASE 2	1	1	1	
Subscription Management & Enforcement	MVP	3	0	0	
Payment System	MVP	1	2	0	
Super Admin Dashboard	MVP	4	0	0	
Audit Logs	MVP	2	0	0	
Offline Capability	PHASE 2	1	0	0	
Mobile Application	PHASE 2	0	0	1	
Advanced Platform Features	PHASE 3	0	0	4	

Part 1 — Core platform modules

Authentication & Account Management MVP

Done	**Sign up, login, logout, password reset** Web and desktop. Login is rate-limited; reset link is single-use and lasts 1 hour.
Done	**Email verification** Link valid 24 hours, can be resent; admins can verify by hand.
Not started	**Phone verification where required** Deferred on 21 Oct 2026. When built: owners only, at onboarding; SMS provider still to choose.
Done	**Session management and profile management** Signed-in devices list, sign out one or all; name and phone editable and audited.
Done	**Two-factor authentication** Authenticator app with QR setup and 10 backup codes, on web and desktop. Delivered early (planned as a later pass).

Organization Management MVP

Done	**Company profile: name, registration number, address, phone, email, logo** Logo stored on Vercel Blob.
Done	**Industry, currency, tax configuration, date format, time zone** All editable on the Organization page.
Done	**Every transaction tied to its organization ID (tenant isolation)** Enforced in every query (application level).
Done	**Guided setup wizard** Website: profile, organization, first warehouse, trial, download. Desktop: a guided flow through company & warehouse, products, opening stock, team invitations and subscription, opening automatically for Owners and Administrators until finished.

User & Permission System (RBAC) MVP

Done	**Six roles: Owner, Administrator, Warehouse Manager, Sales Staff, Inventory Staff, Accountant/Finance** Enforced on the website, in the API and in which desktop screens are visible.
Done	**Granular per-module permissions (view / create / edit / delete)** View, add, edit and archive/delete per module (products, categories & units, stock in/out/adjust, warehouses, customers, suppliers, credit), checked on every API call and deciding which desktop screens and buttons show.
Done	**Owner can assign roles and permissions to staff** Owners and Administrators invite people and change roles; the Owner edits each role's permissions on the website (Team, then Roles & permissions), with reset to defaults and an audit trail. Set per role, not per person.

Product Management MVP

Partial	**Full product record (SKU, barcode, name, description, category, brand, unit, prices, min/max stock, current stock, image, supplier, status)** Everything except the supplier link. The suppliers table now exists, so this can be added.
Done	**Configurable units of measurement** Defaults seeded; custom units per organization.
Done	**Product categories** Configurable per organization. Desktop also has bulk import from Excel.

Inventory Management MVP

Done	**Real-time current stock per product**
Done	**Stock in, stock out, stock adjustment, stock count** Atomic updates; roles limit which types each person can record.
Done	**Full stock movement history (never a silent overwrite)** Ledger records before/after stock, user and reason.
Done	**Low-stock and out-of-stock alerts** Returned by the API, listed in the desktop app and emailed.
Partial	**Inventory valuation** Stock value at cost and retail is shown on the web dashboard and desktop reports. No valuation report or per-warehouse valuation.

Warehouse Management MVP

Done	**Warehouse profile: name, address, manager, phone, status**
Done	**Create, edit, disable warehouses**
Not started	**Per-warehouse stock view and valuation** Stock is held organization-wide on each product.
Done	**Single warehouse in MVP** Enforced by plan limits (one active warehouse on the default plan).

Stock Transfer PHASE 2

Not started	**Transfer products between warehouses (source, destination, quantity, date, user, reason)** Needs per-warehouse stock first.
Not started	**Reference number and transfer status per transfer**

Purchase Management MVP

Partial	**Purchase record (supplier, warehouse, products, quantity, unit cost, discount, tax, total, payment status, paid, balance, date, user)** Desktop records supplier, items, unit cost, payment status, amount paid and balance, saved on that computer only. No warehouse, discount, tax or user, and nothing on the backend.
Not started	**Purchase statuses: draft, pending, received, partially received, cancelled**
Not started	**Receiving a purchase automatically increases inventory** Purchases don't touch stock yet.

Sales Management MVP

Not started	**Sales record (invoice number, customer, warehouse, products, prices, discount, tax, total, paid, balance, payment method, salesperson)** No sales module in the desktop app or backend. Sales Staff can only record stock-out.
Not started	**Completing a sale automatically decreases inventory**

Customer Management MVP

Partial	**Customer record: name, phone, email, address, customer type, credit limit, current balance, status** Everything except customer type. Synced to the backend.
Partial	**Full transaction history: purchases, payments, balances, credit sales, returns** Credit ledger history (charges, payments, adjustments). No sales or returns to show yet.

Credit Sales & Debt Management MVP

Done	**Record credit sales and repayments** Shared ledger; safe against double-posting and simultaneous payments.
Partial	**Track outstanding balances and set customer credit limits** Balances are tracked and a limit can be set, but a charge over the limit isn't blocked or warned.
Partial	**Customer debt history, debt reports, receipts** History per customer is there. No debt report or printable receipt.

Supplier Management MVP

Partial	**Supplier record: name, phone, email, address, contact person, products supplied, outstanding balance** Everything except products supplied. Synced to the backend.
Partial	**Supplier history: purchases, payments, returns, balances** Payments and balance via the credit ledger. Purchases aren't linked (they're local only).

Expense Management MVP

Partial	**Record expenses by category** In the desktop app, saved on that computer only. Not synced.
Partial	**Expense fields: category, description, amount, date, payment method, warehouse, user, receipt** Has category, note, amount, date and payment method. No warehouse, user or receipt attachment.

Returns Management PHASE 2

Not started	**Sales returns (inventory increases)**
Not started	**Purchase returns (inventory decreases)**
Not started	**Every return references its original transaction**

Dashboard & Analytics MVP

Partial	**Key cards (products, inventory value, sales, purchases, customer and supplier debt, expenses, profit, low stock)** Inventory cards are built on web and desktop. Sales, profit and debt cards wait on the sales module.
Partial	**Charts (sales, purchases, expenses, top sellers, stock movement, debt, warehouse performance)** Stock movement, stock value and stock health charts are built. Sales-based charts are not.

Reports MVP

Partial	**Inventory reports: current stock, valuation, movement, low/out of stock, adjustments** Shown in the desktop Reports and Inventory screens, without date or user filters.
Not started	**Sales reports (by period, product, customer, employee, warehouse)** Needs the sales module.
Not started	**Purchase reports (by supplier, product, warehouse)**
Not started	**Financial reports: revenue, expenses, gross profit, debts, payments**
Not started	**Filtering by date, warehouse, user, customer, supplier, product** Excel/PDF export is planned for Phase 2.

Notifications PHASE 2

Partial	**Low/out of stock, subscription expiring/expired, payment success/failure, customer payment, purchase received, transfer completed** Stock, trial, subscription and payment emails are built. Customer payment, purchase received and transfer emails aren't.
Done	**Email notifications (MVP)** Through Resend, with a daily job for reminders and renewals.
Not started	**SMS, WhatsApp and push notifications**

Subscription Management & Enforcement MVP

Done	Plan, status, start/expiry, billing cycle, amount, payment history, renewal status
Done	Statuses: trial, active, past due, expired, suspended, cancelled 14-day trial; locked organizations are refused by the API.
Done	Enforced plan limits (users, warehouses, products) configurable from admin

Payment System MVP

Partial	Subscribe, renew, upgrade, downgrade, cancel Subscribe, automatic renewal and cancel are built. Upgrade/downgrade waits on a proration decision.
Done	Payment verification, history and receipts Paystack in TEST mode: live keys and business verification are still needed.
Partial	Payment provider abstraction (swap or add Flutterwave later) Payments record their provider, but the logic is written directly against Paystack.

Super Admin Dashboard MVP

Done	Platform dashboard: organizations, subscriptions, MRR, new registrations, churn Overview plus an Insights page.
Done	Organization management: view, search, suspend, reactivate, usage and activity
Done	Plan configuration: create, edit, disable, limits and pricing
Done	Payment history, support tickets and issue tracking Payments page and a support inbox with email replies.

Audit Logs MVP

Done	Every important operation logged with before/after values
Done	IP and device information

Offline Capability PHASE 2

Done	Local database with a sync queue Delivered early in the desktop app: products, stock, customers, suppliers and credit are queued offline and synced later.

Mobile Application PHASE 2

Not started	Android/iOS from the same Flutter codebase

Advanced Platform Features PHASE 3

Not started	Accounting and payroll integration
Not started	Point of sale (POS)
Not started	E-commerce integration and public API The v1 API is for the desktop app only.
Not started	Advanced BI, multi-currency/country, advanced tax

Part 2 — Differentiator features

✗ Not started	WhatsApp-native workflows MVP / NEAR-TERM	
✗ Not started	Customer credit risk scoring MVP / NEAR-TERM	The customer and credit data it needs now exists.
✗ Not started	Photo-evidence stock adjustments MVP / NEAR-TERM	Image storage is in place; stock movements don't take a photo yet.
✓ Done	Offline-first with sync PHASE 2	Built in the desktop app.
✗ Not started	Landed-cost calculator for imports PHASE 2	
✗ Not started	Inter-business network (surplus marketplace, pooled purchasing) PHASE 2	
✗ Not started	Embedded inventory financing PHASE 3	

Suggested next steps

1. **Sales module.** The biggest MVP gap: sales records and invoices that reduce stock, sync to the backend, and feed the dashboard and reports.
2. **Move purchases and expenses to the backend.** Today they live on one computer. Add purchase statuses and make receiving increase stock.
3. **Small gaps in built modules.** Product-supplier link, customer type, enforcing credit limits, and an inventory valuation report.
4. **Plan upgrade/downgrade.** Decide on proration.
5. **Go live with Paystack.** Live keys and business verification.
